# Seasonal olive oil purchasing plan

## Cedar Crest

Cedar Crest is a fictional Ajloun supermarket preparing a seasonal olive oil purchase. The record is a purchasing scenario dated 15 October 2026. Its scenario assumptions are not a generated demand forecast or a signed supplier commitment.

| Reference item | Recorded value |
|---|---|
| Supplier | Hilltop Press |
| Product / pack | Extra virgin olive oil / 1 L |
| Planned purchase | 120 bottles |
| Purchase cost per bottle | 5.40 JOD |
| Planned retail price | 7.10 JOD |
| Planned purchase outlay | 648.00 JOD |

## Rules and interpretation

The supplier's indicative lead time is seven calendar days after order acceptance. A 30% deposit is required on acceptance and the balance on delivery. Finance approval is required before the order is placed. No customer preorder is recorded. The scenario assumes all 120 bottles are sold at the planned regular price with no markdowns or returns.

## Worked example / decision note

At full sell-through, scenario revenue would be 852.00 JOD and gross profit 204.00 JOD before operating costs. The deposit would be 194.40 JOD and the delivery balance 453.60 JOD. These conditional figures are not actual recorded sales or net profit.
