Dairy cold-chain control

Glacier Dairy

Glacier Dairy supplies fresh milk and yogurt to a fictional Salt supermarket. This is a cold-chain operating record for 15 October 2026, not a medical or food-law standard. Staff must follow the fictional store controls below.

Reference item	Recorded value
Milk SKU	MILK-GL7
Milk shelf price / cost	1.35 / 0.98 JOD
Accepted chilled temperature	1-4 degrees Celsius
Minimum remaining shelf life	5 days
Temperature recording times	08:30 and 16:30
Current stock / reorder point	54 / 70 cartons

Rules and interpretation

A reading above 4 degrees Celsius requires stock to be held for supervisor review; it does not authorize staff to sell or discard it automatically. The receiving team rejects deliveries with fewer than five days remaining shelf life. Use first-expiry-first-out rotation. Glacier Dairy delivers Sunday, Tuesday and Thursday; the quoted lead time is two calendar days.

Worked example / decision note

The morning delivery arrived at 3 degrees Celsius with six days remaining shelf life and passed receiving checks. The afternoon refrigerator reading was 5.2 degrees Celsius, so the affected batch was held pending review by Hala Mansour. Stock is below the replenishment trigger.

Scope: synthetic test reference only. This document does not create KEEL transactions, change live stock, or establish facts about a real business.
